## DETAILED ACTION

### *Continued Examination Under 37 CFR 1.114*

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 2/17/04 has been entered.

### *Specification*

2. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed. The title is broad and does not convey the claimed invention.

3. Rejections of the previous Office Action are withdrawn and replaced by the new rejections below, as necessitated by amendments and arguments.

### *Claim Rejections - 35 USC § 103*

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 1762

5. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

6. Claims 1,6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Haghiri et al US 5888624 in view of Gundjian US 5290068.

Haghiri et al teaches an IC card ("sheet") with printed images and security elements including watermarks (col. 9, 51-52), to which is applied a lacquer layer (gloss, matte, grained), col. 9, 15-54, over all faces and edges (the "whole surface" of the card) to provide protection and prevent splitting. Partially coating the watermark prior to applying the final protective lacquer coating to the card is not cited.

Gundjian teaches to secure substrates against counterfeiting, copying, and FAX transmission using a series of security elements. In the embodiments on col. 7, 15-26, it is recognized that the application of lacquer to a surface adds "gloss to the surface..., since specular reflection characteristics... enhance uncopiability of the final product". Thus, the reference fairly teaches to reduce copiability of security documents by application of suitable lacquer to form a reflective gloss. Since both references are directed to ways of improving security of documents, the importance of preventing critical security elements, such as the watermark of Haghiri et al, from being reproduced using a separate gloss lacquer coat as disclosed by Gundjian would have been

Art Unit: 1762

an obvious improvement to enhance security of the document. The reference is not limited by lacquer type and would have included conventional colorless lacquers, per claim 6.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the process of Haghiri et al by applying a suitable lacquer coating to add gloss/specular reflection characteristics as taught by Gundjian to the surface of watermarks of Haghiri et al to prevent reproduction and transmission of the security documents.
